

Instruction to change the battery of the Rayocomp PS 10

1. Use a crosstip screwdriver to loosen the screw (left-turning) of the battery panel on the rear side.

2. Pull the battery out of the panel by means of a screwdriver. **Attention!!** Do not poke the screw driver into the battery and do not drag it out forcibly.

3. Pull the battery out until the plug connector system is completely out of the panel.

4. Press the locking device clip until the catch releases the counter piece, then disconnect the plug connector system. Then you can change the battery. The assembly is carried out in a retrogressive operation sequence from picture 4 to picture 1.
